

Alfonso Alzamora, P.E.
Vice President of Engineering

Alfonso Alzamora is Vice President and Director of Engineering at GCI. He is a Florida licensed professional engineer with fifteen years of consulting and engineering experience, specializing in architectural engineering design and inspection of building envelope elements for new and existing structures. Mr. Alzamora has worked on hundreds of projects in North America and the Caribbean. He provides technical and engineering expertise on new construction projects to develop and construct high performance building enclosure systems. Mr. Alzamora also has extensive experience working on buildings with envelope performance problems, conducting forensic evaluations that lead to remedial design and management of replacement or rehabilitation programs, as well as associated litigation support services. Mr. Alzamora is involved in business development with owners, architects, engineers, construction professionals and property managers. He is a member of various industry organizations, has published articles in several newsletters, and holds credentials as a certified general contractor and LEED professional.
